Subject: RE: Hyponatraemia Guidelines

Hi,

I have just recieved a letter from the Medicines Control Agency. They have conducted a safety review of 0.18 NaCl.... and suggest that "electrolyte imbalance is a risk" will all iv solutions and that "careful monitoring" is crucial. However they have advised that there should be no amendments to product information.

This letter is compatible with your guidelines.

I will send a copy by snail mail.

BOB
