Miriam

Hope you had a good break by the time you read this. I am happy with the document. My only comment on the poster (which looks very well) is that the title might be better to avoid specifying IV fluids as we also highlight the dangers of inappropriate oral fluids in sick children. Could we simply leave out the subtitle?

Best wishes

John

Following SAC surgery and the medical directors meeting last week I have had feedback that we should include some reference to .18% saline and I have added one very brief statement in under 'choice of fluids' and would be happy to have your views. I have made a few other minor amendments

- Changed title
- refer to child rather than children where possible
- added reference to overhydration (is this redundant or worth keeping)

Happy to receive all comments- I will be on leave from 21st Dec until 2nd

early Jan but hope to finalise changes and get to the printers in January.

I have also attached a first draft from printers - presentation looks good-I thought an A2 would be the right size(twice as big as A3) and that about 300 should provide one for all clinical rooms/ nursing stations in paediatric units. Ignore content in this version -using a previous draft.

I think/ hope this is our final lap.

Many thanks for all your help in drafting these guidelines.
