Dear Dr Scott

Re: Adam Strain [REDACTED]

Adam was well at the clinic, which is very pleasant. As you know, he has chronic renal failure and is on Furadantin, Ferromyn and Biocarbonate. His renal bone profile is reasonably satisfactory, though his calcium is perhaps a little on the low side.

He continues to be completely fed by tube feeds, by kangaroo pump at night.

We will see him again in six weeks' time. There is no need to change any of his therapy at present.

Yours sincerely

Maurice
