

CONOR MITCHELL, DECEASED

4th September 2003

Brian Herron telephoned me to explain that he felt he required assistance in this case. He said that this child had been admitted to Craigavon Area Hospital and had then been transferred to the Royal Victoria Hospital where he died. There had been a rapid change in condition from hyponatraemia to hypernatraemia. We discussed the implications and it was agreed that Brian would correspondent direct with Dr Sumner. I said I would write to Dr Sumner explaining that this would be happening.
