SURNAME : MITCHELL
OTHER NAMES : CONOR-C
HOSPITAL NO. : CH334505
D.O.B./SEX : 12-Oct-87 / MALE
DATE OF REPORT: 22-Apr-88

C.A.T. SCAN OF SKULL 22-APR-88

Diagnostic Code 10.553

There is an extensive superficial low density lesion on the left side which is approximately in the distribution of the left middle cerebral artery and is in apparent communication with a dilated left lateral ventricle. There is atrophy of the underlying cerebral hemisphere. A similar small wedged shaped superficial area of low density is present on the right side in the posterior frontal region, and again it appears to be in continuity with the dilated right lateral ventricle. The 3rd and 4th ventricles are normal. There is no evidence of mass effect.

CONCLUSION - The appearances are consistent with bilateral porencephalic cysts, more marked on the left. The history, along with the CT appearances would suggest that there has been an in-utero ischemic event.

COST OF EXAMINATION(S) £103.00
