List of previous statements, depositions and reports attached:

Ref:	Date:	

Particular areas of interest*[Please attach additional sheets if more space is required]***1. Describe in detail your role in the treatment and care of Raychel Ferguson to include any concerns or observations you had in relation to Raychel.**

I qualified as a staff nurse in 1984. Worked for 2 years in Musgrave Ward in R.B.H.S.C. Since 1986 have worked as a staff nurse in the Paediatric Ward in Altnagelvin.

On 8 June 2001 I was working on the day shift on Ward 6 along with Sr Millar and S/N Michaela Rice. Other nurses were on duty in Ward 6 but they would have had no direct involvement with Raychel that day.

I came on duty at 7.45am. I was allocated to Rooms A to J. Raychel was nursed in Room I. However at some stage during that day I was requested to work in the Infant area as one of the staff had gone off sick. I would have worked there most of the rest of the day apart from times when I was required to assist other nurses on the ward.

I have no recollection of dealing with Raychel before 1.00pm. From the records it would appear that at 1.00pm I took the observations and again at 5.00pm. See page 020-015-029. At 1.00pm she was not complaining of pain, her temperature, pulse and respiratory rate were normal. I also checked her IV fluids and site at that time. Solution 18 was running at 80mls per hour. I have recorded that Raychel vomited at 1.00pm. At this stage I have no recollection of this. The use of 2++ meant that the vomit was small to medium in amount. See page 020-018-037.

I have also recorded on that sheet that Raychel vomited again at 3.00pm. Again I have no recollection of this stage but the use of 2++ would indicate that the vomit was small to medium in amount.

At 5.00pm I recorded her observations see page 020-015-029. At that time Raychel was asleep. Her temperature, pulse and respirations were normal. I also checked her IV fluids and site. Sol 18 was still running at 80mls per hour. I cannot remember having any further involvement in nursing Raychel after that time. I had no discussions with Raychel's family on that day or at any time after that. At that time I had no concerns about Raychel's condition or her management. In my experience it is quite common in postoperative surgery for children to vomit.

2. Give details of any contact you had with colleagues at RBHSC after the transfer of Raychel to RBHSC.

None

Other points you wish to make including additions to any previous Statements, Depositions and or Reports
