Dear Dr Connor

Re: Lucy Crawford, DOB: 22/11/98

Date of admission: 16/12/99
Date of discharge: 17/12/99
Diagnosis: RSV

This little girl was admitted with a 5 day history of cough and runny nose, fever for the past 4 days and respiratory distress with wheezing for the past day.

On examination her respiratory rate was 40/min, pulse 140/min and oxygen saturations were 92%. Chest examination revealed hyperinflation, decreased air entry and bilateral rhales. She was treated with paracetamol and Amoxil 500mg twice daily. On admission RSV was detected in her nasal secretions. She has improved and Mum was happy to take her home.

No review has been arranged.

Yours sincerely

Dr A Malik
SHO in Paediatrics
