DOB 91-08-04 HOSP NO 364377

DATE OF ADMISSION TO ICU 91-12-08

DATE OF DISCHARGE FROM ICU 91-12-09

DAYS IN ICU 1

DIAGNOSIS: POSTOP URETEROSTOMY

ICU DISCHARGE SUMMARY

Adam was admitted to the Intensive Care Unit on the 8.12.91 from theatre post-op cystoscopy, laparotomy, (L) ureterostomy and central line insertion.

His basic underlying problem is: 4/12 boy with congenital dysplastic kidneys causing recurrent UTI's. He had an ureteric reimplantation on the 23.11.91 which obstructed leading to acute renal failure. He then required bilateral nephrostomies and PD canula insertion on the 4.12.91 - but (L) nephrostomy tube leaked causing need for the (L) ureterostomy. He was discharged on the 9.12.91 to Musgrave Ward.
