Adam Strain 364377 Musgrave/Intensive Care

Operation performed Laparotomy T tube drainage of ureters and Date 28/11/91
insertion of peritoneal dialysis cannula

Surgeon Mr.S.Brown FRCS Anaesthetist DR. Galagner

Assistant Sister

Incision

Findings

Procedure Mid line upper transverse incision transperitoneal. Kidneys and ureters identified. Both kidneys small. left cystic and dysplastic and the right very small. Ureters markedly dilated and tense although no dilatation of renal pelvis or intra renal elements. Both ureters opened and drained and T tube drainage. established extra peritoneally. Omentum removed and peritoneal dialysis cannula inserted via separate incision from the wound. Wound was then closed with catgut pDS and Dexon.
