re: - Adam Strain,

Dear Dr Savage,

Thank you for seeing this 8 day
old baby born 4-8-91 but 4940g with
bilateral multicystic kidneys. Scans antenatally
in RMH detected cysts thought to be ovarian.
Baby otherwise well with no dysmorphic
features.

US scan - bilat multicysts with megaureter
mic. cyst - no reflux.

.VP - minimal excretion bilaterally.

He is now tolerating all milk feeds.

Electrolytes 11-8-91. Na 139; K 4.4; Cl 110;

CO₂ 17 urea 5.4, Creatinine 170.

Please find enclosed x-Rays

Yours sincerely
Angela Bell.
