Procedure

Peg was placed in the left upper quadrant using a French gauge. A peritoneal cavity was opened. A French gauge PEGD catheter was railroaded through a stab incision in the left upper quadrant using a Westminister trocher and cannula to the peritoneal cavity. The wound was closed in layers with 4 x 0 PDS. The catheter was sutured in situ with one 4 x 0 PDS at skin level. Teflon cuff was sited just below the skin level.
