Dear Dr Scott

Re: Adam Strain

I am happy to say that Adam has recovered well from his recent pseudomonal urinary tract infection. He was given 5 days of Azlocillin and a repeat urine sample. He has now come back.

He has remained well and is presently on Sodium Bicarbonate 12.5 gms, 10mls bd and Nitrofurantoin 2.5mls nocte.

Urine sample demonstrated + protein and ++ glucose. There has been some leakage from his gastrostomy site and I am looking to arrange a gastrostomy button, which will hopefully alleviate this problem.

We will see him again in 6 weeks time.

Yours sincerely

N Rollins
