

DIAGNOSIS OF BRAIN DEATH

CH 476554

PATIENT'S NAME Rachel Ferguson

AGE 9

UNIT NO: 476554

DOCTOR 1 D. Hume

DOCTOR 2 Chen

DIAGNOSIS Hypoxaemia

Cerebral Oedema

(Condition leading to brainstem death)

	1st Test		2nd Test	
	Date: <u>9.6.01</u>		Date: <u>10.6.01</u>	
	Time: <u>17.30</u>		Time: <u>9.45</u>	
	Dr 1	Dr 2	Dr 1	Dr 2
1. DRUGS/HYPOTHERMIA				
a. Have any muscle relaxants been given during the preceeding 12 hrs?	No	No	No	No
b. Could any significant neuromuscular blockade remain?	No	No	No	No
c. Could other drugs affecting ventilation or level of consciousness been responsible for the patient's condition?	No	No	No	No
d. Is the rectal temperature below 35°C?	No	No	No	No
e. Is the blood pressure adequate and stable?	Yes	Yes	Yes	Yes
f. Could patient's condition be due to a metabolic/endocrine disorder?	No	No	No	No
2. BRAINSTEM RELFEXES				
a. Do the pupils react to light?	No	No	No	No
b. Is conjugate deviation of the eyes induced by instilling ice cold water on each eye (Caloric test)?	No	No	No	No
c. Is any eye movement present when head rotated (Doll's eye reflex)?	No	No	No	No
d. Does any response occur when each cornea in turn is touched?	No	No	No	No
e. Is there any response to painful stimuli in the area supplied by the cranial nerves?	No	No	No	No
f. Is there a gag reflex or reflex response following bronchial stimulation by a suction catheter passed down the trachea?	No	No	No	No
3. APNOEA TEST				
a. Is there any evidence of spontaneous respiration?	No	No	No	No
b. Did PaCO ₂ rise above 50 mmHG during apnoea test?	Yes	Yes	Yes	Yes
c. Was there any evidence of spontaneous respiration during apnoeic period?	No	No	No	No
