Subject: RE: Guidance on the prevention of hyponatraemia in children

Nicki,

Thanks for this--I would be happy to chat with you about the guidance and possible modifications in light of responses received to date. I will be on leave from 16/7 until 10th August and will need to work on this when I return. Your help and suggestions would be appreciated

Miriam

Subject: Guidance on the prevention of hyponatraemia in children

Miriam,

Thank you for ccing me into your recent correspondence re: the above. Looking at the distribution list (perhaps the original working group?), I wonder if it would be worth widening it to all inpatient paediatric facilities and A&E depts to which children may present and receive initial treatment prior to transfer. This would give a broader picture of the level of awareness of the guidance across the service and any issues etc with it's implementation.

Happy to discuss

Nicki
