ROYAL BELFAST HOSPITAL FOR SICK CHILDREN

NURSING CARE PLAN

DATE	PROBLEM	GOALS	NURSING ACTIONS	REVIEW DATE/SIG
21/10/96 ②	(Eating + Drinking) Claire has been vomiting and requires an intra-venous infusion.	To prevent dehydration and ensure safe administration of IV fluids.	- Observe and report episodes of vomiting - observe amount, colour, consistency of vomit - Administer IV fluids as prescribed by doctor, according to hospital policy. - Check rate and flow of infusion hourly - Ensure cannula is well secured and taped, and observe cannula site hourly for redness, swelling, pain. - Offer clear fluids as tolerated. - As condition improves progress to free fluids -> light diet -> normal diet. - Record accurate fluid balance chart. - Assist dr. with necessary investigations. - Report abnormalities to doc/nurse in charge.	21/10/96 R/V Daily SN Gm Randal
