CLINIC 3.2.92

28 February 1992

Dr. McMillan,  
220 Knock Road,  
BELFAST

Dear Dr. McMillan,

re; Claire Roberts, [REDACTED] DOB 10.1.87

Claire was reviewed at out-patients on the 6th February 1992.

I was delighted to hear that she had had no further convulsions since her Epilim was increased on the 26th September 1991. She is now taking 7.5 mls (300 mgs) twice daily and the serum Valporic level on this dose was satisfactory at 90.8 mgs per litre. I have suggested that she continue with the same medication.

Claire is now 5 years of age and is unfortunately not making progress at school. She will most likely be transferred to Torrbank School.

I have arranged to review her in 6 months' time.

Yours sincerely,

Dr. J. Major,  
Associate Specialist in  
Paediatric Medicine
