Dear Dr McMillin

re; Claire Roberts [REDACTED] (DOB 10.1.87)

Mrs Roberts telephoned this morning to apologise for missing today's appointment.

She tells me that Claire has had no convulsions since the medication was increased on 26.9.91. Her mother had previously telephoned me to report frequent seizures during the month of September. I have suggested increasing the Epilim from 5 mls twice daily, that is 200 mgs twice daily, to 300 mgs twice daily..

A serum valporic level was carried out on 10.10.91 and the level was at the upper end of the reference range.

I have told Mrs Roberts to continue with the same dose and we will review Claire in 4 months' time.

Yours sincerely

Dr Joan Major MB DCH
Associate Specialist
