Dear Dr McMillan

RE: Claire Roberts, [REDACTED]

Claire Roberts telephoned to say that Claire had a further convulsive episode last night. I suggested that she increase her Epilim to 4mls daily and we will repeat a serum valproic level in 2-3 weeks time.

Her EEG report shows - Awake record is technically rather poor due to constant movement but there is no obvious abnormality.

Yours sincerely

Dr J Major MB DCH  
Associate Specialist in Paediatric Medicine
