RE: Email from Mr A P Walby re Claire Roberts (deceased)

I accept the evidence of Dr Heather Steen, Consultant Paediatrician, that the first blood test showing a serum sodium level of 121 mmol/l should have led to a clinical re-assessment of Claire. That blood test should have been repeated and at the same time there should have been a reduction in fluids.

The fluids were restricted and I do think it is important that we draw attention to it. As it sounds that we didn't
Heather

Heather

HM Coroner's Office have provided the attached Verdict dated 4.5.06. You will note that in the third last sentence it states that ".... and at the same time there should have been a reduction in fluids". From your Deposition (page 2 first paragraph) it records that the saline was reduced to 2/3 of its value.

I think HM Coroner meant to say ".... there should have been a greater reduction in fluids". It may seem a small point but the Verdict is wrong on this point and I wonder do you think I should ask the Trust's solicitor to point this out to HMC?
