<b>1995</b>		Ref: 080-013-299	HPSS Management Plan 1995/96 to 1997/98 including the following under 'Best Practice' it states: <i>"Providers need to continue to focus on improvement in standards of practice" and "Specifically units should ensure that there is a clear policy on: clinical audit as part of a programme to improve all aspects of service quality, not just clinical outcomes".</i>

**SCHEDULE 2: From Adam's death on 28<sup>th</sup> November 1995 to the Inquest Verdict on 21<sup>st</sup> June 1996**

<b>Date &amp; Time</b>	<b>Events in relation to Adam</b>	<b>Source/ Reference</b>	<b>Other Developments</b>
<b>28<sup>th</sup> November 1995</b> 09:10	Second brain stem test carried out by Dr. David Webb <sup>8</sup> with Dr. Mary O'Connor <sup>9</sup> present. He records that the brain stem death criteria are fulfilled Adam's mother wishes to discuss organ donation. Coroner advises against organ donation 'in view of medico-legal reasons' <sup>10</sup>	Ref: 058-004-009; Ref: 058-035-142  Ref: 058-035-142; Ref: 058-004-009	

<sup>7</sup> This was the Trust's policy for complaints at the relevant time

<sup>8</sup> Dr. David Webb (Consultant Paediatric Neurologist, RBHSC): See Schedule of Persons for details

<sup>9</sup> Dr. Mary O'Connor (Consultant Paediatric Nephrologist, RBHSC): See Schedule of Persons for details

<sup>10</sup> Subsequently this decision was reversed

? <sup>11</sup>	3 photographs are taken of Adam	Ref: 093-005-007	
09:30	Constable Stephen Tester <sup>12</sup> is informed of Adam's death. He records that he was made aware of the circumstances surrounding Adam's death by Dr. Maurice Savage <sup>13</sup> and that life had been pronounced extinct at about 09:00 by Dr. David Webb	Ref: 011-008-024 <sup>14</sup>	
11:15	Adam's body is identified to Constable Tester by Dr. Maurice Savage in the presence of Adam's mother	Ref: 011-008-024	
11:30	Ventilatory support is withdrawn from Adam with his other's consent and in her presence	Ref: 058-035-142; Ref: 011-015-109	
	Fluids and monitors are discontinued and all lines are removed in accordance with Dr. Maurice Savage's instructions	Ref: 058-035-142; Ref: 011-015-109	
13:00	Nursing observations are discontinued	Ref: 058-038-164	
	A further photograph is taken of Adam	Ref: 093-005-007	
	Note is prepared by Dr. Maurice Savage on Adam, which he copies to Dr George Murnaghan <sup>15</sup> and Dr. Robert Taylor. <sup>16</sup> It provides a summary of his direct involvement and includes: <i>"His serum electrolytes,<sup>17</sup> haemoglobin and coagulation were satisfactory. H.B. 15.5g/dl, Na 139, K 3.6, Urea 16.8, Ca.2.54, Albumin 40, Prothrombin time 12.3. His chest</i>	Ref: 059-066-153	

<sup>11</sup> Time as yet unknown

<sup>12</sup> Constable Stephen Tester: See Schedule of Persons for details

<sup>13</sup> Dr. Maurice Savage (Consultant Paediatric Nephrologist, RBHSC): See Schedule of Persons for details

<sup>14</sup> Deposition of Constable Stephen Tester

<sup>15</sup> Dr George Murnaghan (Director of Medical Administration at the Royal): See Schedule of Persons for details

<sup>16</sup> Dr. Robert Taylor (Consultant Paediatric Anaesthetist, RBHSC): See Schedule of Persons for details

<sup>17</sup> For 'serum electrolytes' see: Glossary of Terms

	<i>was clear on examination. B.P. 108/56. He was apyrexial.<sup>18</sup> There were no signs of infection. His night gastrostomy feeds are normally 1.5l of Nutrizon. On anaesthetic advice this was changed to clear fluid which was stopped two hours pre op. This meant he had 900mls of Dioralyte overnight"</i>		
	Dr. Maurice Savage reports Adam's death to the Coroner <sup>19</sup> as being 'totally unexpected'	Ref: 011-025-125	
	An Autopsy Request form is signed by Dr. Robert Taylor in which he records that Adam arrived in theatre with a 300mls fluid deficit and that there was excessive bleeding throughout the surgery at the end of which Adam was found to have fixed and dilated pupils. He also records: (i) chest x-ray showing pulmonary interstitial oedema; <sup>20</sup> (ii) CT-scan showing gross cerebral oedema <sup>21</sup> , - obliteration of the ventricles <sup>22</sup> ; (iii) serum sodium falling to 119mmol/l. The clinical diagnosis is recorded as: " <i>osmotic disequilibrium syndrome</i> " <sup>23</sup> ; (iv) further fluid administration due to the on-going blood loss and the poor vascular supply of the donor kidney. He records the clinical problems in order of their importance as: (i) renal transplant - donor organ in the right iliac fossa <sup>24</sup> ; and (ii) cerebral/pulmonary interstitial oedema	WS-012/1, p.19	
??	The Coroner orders a post-mortem		
29 <sup>th</sup>	Siemens Patient Monitor, Model	Ref: 094-210-	

<sup>18</sup> For 'apyrexial' see: Glossary of Terms

<sup>19</sup> Mr. John Leckey (HM Coroner for Greater Belfast): See Schedule of Persons for details

<sup>20</sup> For 'pulmonary interstitial oedema' see: Glossary of Terms

<sup>21</sup> For 'cerebral oedema' see: Glossary of Terms

<sup>22</sup> For 'ventricles' see: Glossary of Terms

<sup>23</sup> For 'osmotic disequilibrium syndrome' see: Glossary of Terms

<sup>24</sup> For 'right iliac fossa' see: Glossary of Terms

<p><b>November 1995</b></p>	<p>1281 is reported faulty (dim display) – this is the CVP monitor that was used in Adam’s transplant surgery. It is removed by John McKirgan<sup>25</sup> of Siemens and a ‘demo unit’ is left in its place</p>	<p>1001 &amp; Ref: 094-210-999</p>	
<p>14:00</p>	<p>Constable Tester identifies Adam’s body to Dr. Alison Armour<sup>26</sup></p>	<p>Ref: 011-008-024</p>	
<p>14.40</p>	<p>Post-mortem examination is carried out by Dr. Alison Armour who reports her principal findings to the Coroner as cerebral oedema<sup>27</sup> and states that a completed report will follow [after the examination of the brain following ‘fixing of the brain’<sup>28</sup>]. Histological slides are taken by Dr. Alison Armour from (a) lungs (b) larynx (c) liver (d) kidney (e) transplanted kidney (f) spleen (g) lymph nodes<sup>29</sup> (h) brain (i) spinal cord</p>	<p>Ref: 094-114-321  Ref: 011-010-035</p>	
	<p>Dr. Alison Armour telephones the Coroner to say that she is ‘mystified’ as to why Adam had died and the Coroner records that conversation as: <i>“He[sic] findings at autopsy were the grossest cerebral oedema she had ever seen. She said the brain was pressing right up to the dura”</i>. Following the Coroner’s query over ‘hypoxia-anoxia’<sup>30</sup>, Dr. Alison Armour agreed that there might be an anaesthetic problem ie: <i>“... it could either be something to do with the anaesthesia or the anaesthetic equipment ... [she] had also discussed the case with the anaesthetist Dr. Bob Taylor. Both she and he were mystified about what had happened”</i></p>	<p>Ref: 011-025-125</p>	

<sup>25</sup> Mr. John McKirgan (Siemens): See Schedule of Persons for details

<sup>26</sup> Dr. Alison Armour (Senior Registrar State Pathologist’s Dept): See Schedule of Persons for details

<sup>27</sup> For ‘cerebral oedema’ see: Glossary of Terms

<sup>28</sup> For ‘fixing of the brain’ see: Glossary of Terms

<sup>29</sup> For ‘lymph nodes’ see: Glossary of Terms

<sup>30</sup> For ‘hypoxia-anoxia’ see: Glossary of Terms

<p><b>30<sup>th</sup> November 1995</b></p>	<p>The Coroner notifies Dr. George Murnaghan that he would be holding an Inquest and seeking an independent medical/ anaesthetic report from Dr. John Alexander</p>		
	<p>The Coroner writes to Dr. John Alexander asking him to prepare an anaesthetic report on Adam's case for use at the Inquest. He states that Dr. Alison Armour informed him that she found gross cerebral oedema, the worst she had ever seen in an autopsy on a child. He identified the clinicians involved as Dr. Robert Taylor and Messrs. Stephen Brown and Patrick Keane. He also stated: <i>"... the child was healthy and considered to be an ideal candidate for transplant surgery. No complications were anticipated."</i></p>	<p>Ref: 011-018-116</p>	
	<p>The Coroner writes to Dr. George Murnaghan confirming that Dr. John Alexander had agreed to provide an anaesthetic report for the Inquest and seeking statements from the clinicians involved as soon as possible. It also stated: <i>"it would be useful to have a statement from the technician responsible for the equipment in theatre confirming that it was functioning properly. The statement should cover the frequency of checks and whether such checks were carried out before and after surgery in this instance"</i></p>	<p>Ref: 059-073-166</p>	
	<p>The Coroner writes to Mrs. Susan Young<sup>31</sup> seeking a statement from: <i>"Mr. Keane fully detailing his part in the surgery and commenting as to whether it progressed uneventfully or otherwise"</i></p>	<p>Ref: 011-020-119</p>	
	<p>Letter from Dr. Robert Taylor to</p>	<p>Ref: 059-067-155</p>	

<sup>31</sup> Mrs. Susan Young (Complaint's Officer, BCH): See Schedule of Persons for details

	<p>Dr. George Murnaghan explaining his position, including: <i>"The pulse rate, CVP and arterial blood pressure gave me no cause for concern throughout the case, and a blood gas at 09.30am confirmed good oxygenation and no sign of acidosis or any indication of problems. In view of the CVP, heart rate and BP I did not consider the fluids to be either excessive or restrictive. Indeed I regarded the fluids to be appropriate and discussed this with other doctors present in the theatre"</i></p>		
<b>2nd December 1995</b>	<p>Siemens Patient Monitor, Model 1281 is returned to the Department by John McKirgan where it is left 'on test'</p>	<p>Ref: 094-210-1000 &amp; Ref: 094-210-999</p>	
	<p>Dr. Alison Armour telephoned the Coroner to say that <i>"she was becoming ever more convinced that there was a question mark against the equipment"</i></p>	<p>Ref: 011-025-125</p>	
<b>2nd December 1995</b>	<p>Dr Fiona Gibson visits the operating theatre suite of the RBHSC at the request of Drs George Murnaghan and Joe Gaston to discuss with Dr Robert Taylor three patients (including Adam Strain) whose post-mortem examination had been brought to the attention of the Coroner. She was accompanied by Mr. John Wilson<sup>32</sup> and Mr. Brian McLaughlin<sup>33</sup>, both Senior Technical officers, on the site who carried out checks into the ventilators and other equipment in the theatre.</p>	<p>Ref: 059-065-132</p>	
<b>December 1995</b>	<p>The report of Messrs. Wilson &amp; McLaughlin (signed by John Wilson only) stated that: <i>"Siemens Patient Monitor, Model 1281, Serial No. (This monitor is currently out for repair – new display screen is being fitted and a loan monitor is in use) ..."</i></p>	<p>Ref: 011-028-147</p>	

<sup>32</sup> Mr. John Wilson (Medical Technical Officer, RBHSC): See Schedule of Persons for details

<sup>33</sup> Mr. Brian McLaughlin (Medical Technical Officer, RBHSC): See Schedule of Persons for details

	<p><i>The Anaesthetist using the machine is also expected to sign the log before commencing the list but this does not happen on most occasions. A reason for this omission should be requested” and referred to the: “protocols and monitoring procedures set up within the RBHSC’s Theatres”</i></p> <p>Brian McLaughlin confirmed that the Siemens monitor that was present was functioning within specification. However, John Wilson “cannot confirm that the Siemens Patient Monitor [he] tested was the specific monitor used in any specific operation.”</p> <p>Brian McLaughlin also states this, though he says:  <i>“These monitors are not easily moved and are not routinely replaced unless they are defective. Therefore I would say from my experience it is very likely the monitor which we examined on 2<sup>nd</sup> December 1995 was the monitor used in theatre on 27<sup>th</sup> November 1995 unless records show that a monitor was removed from theatre RBHSC after 27<sup>th</sup> November 1995 and before 2<sup>nd</sup> December 1995”.</i></p> <p>In addition, there was “a very remote possibility” of a gas mismatch.</p>	<p>Ref: 093-028-076 &amp; Ref: 093-027-072</p>	
<p><b>3<sup>rd</sup> December 1995</b></p>	<p>Meeting of the Coroner, Dr. George Murnaghan, Dr. Joe Gaston<sup>34</sup> and Dr. Samuel Lyons<sup>35</sup> at which Dr. Lyons suggested that it was important to have another paediatric anaesthetic opinion apart from Dr. John Alexander as he did not have extensive paediatric experience Dr. Joe Gaston’s opinion at the time was that “<i>the learning from this case was primarily in paediatrics, however it was very limited in general anaesthetics due to the unique nature of Adam’s case” and that “in routine cases in general anaesthetics, Consultant</i></p>	<p>Ref: 011-027-128 &amp; Ref: 093-024-066</p> <p>Ref: 093-023-065; Ref:093-024-066 &amp; Ref: 093-025-068</p>	

<sup>34</sup> Dr. Joseph Gaston (Director of Anaesthetics, Theatres & Intensive Care, Royal): See Schedule of Persons for details

<sup>35</sup> Dr. Samuel Lyons (Consultant Cardiac Anaesthetist, Royal): See Schedule of Persons for details

	<i>Anaesthetists in the Royal Hospitals should have been able to prevent the development of hyponatraemia"</i>		
<b>4<sup>th</sup> December 1995</b>	<p>Report of Dr Fiona Gibson,<sup>36</sup> which states: <i>"The technical checks demonstrated a high degree of vigilance in this area, found nothing at fault in relation to the cases in question but identified a problem relating to pin indexing which the whole hospital will now address"</i> and <i>"The Protocols for monitoring, anaesthetic set-up and drug administration in this area are among the best on the Royal Hospitals site"</i></p> <p>Dr Gibson acknowledges Wilson and McLaughlin's finding of a possible pin problem, but states <i>"having examined the anaesthetic record that there was no mismatch of gases during the operation."</i></p>	<p>Ref: 011-005-017</p> <p>Ref: 093-026-069</p>	<p>It has since been confirmed by the Trust that it is their belief that <i>"the Protocols referred to by Dr Gibson did not exist in written form"</i>. (INQ-0346-11)</p>
<b>6<sup>th</sup> December 1995</b>	<p>Letter from PSNI to the Coroner attaching Form 19 in respect of Adam's death, with the request that he <i>"inform this office if an inquest is necessary in order that an inquest file may be prepared"</i></p>	<p>Ref: 011-022-121 &amp; Ref: 011-022-122</p>	
	<p>Memo from Dr George Murnaghan to Drs. Savage, Taylor, Gaston and Webb and to Messrs. Brown and Wilson – advising that the Coroner is seeking statements from the clinicians involved as soon as possible. It also referred to the Coroner's request for: <i>"a detailed statement from the anaesthetic technical staff about the equipment used during the surgery and anaesthesia"</i> and stated <i>"This has been arranged"</i></p>	<p>Ref: 059-071-164</p>	
	<p>Siemens Patient Monitor, Model 1281 is returned to service from having been in the Department 'on test'</p>	<p>Ref: 094-210-1000 &amp; Ref: 094-210-999</p>	
<b>7<sup>th</sup> December</b>	<p>Dr. Armour also showed certain,</p>	<p>Ref: 011-025-125</p>	

<sup>36</sup> Dr. Fiona Gibson (Consultant Anaesthetist, Royal): See Schedule of Persons for details

<b>1995</b>	unidentified, histology “slides etc” to Dr. O’Hara <sup>37</sup> and Dr. Bharucha <sup>38</sup>		
<b>8<sup>th</sup> December 1995</b>	Letter from Dr. Alison Armour to Professor Crane <sup>39</sup> and copied to the Coroner, Dr. George Murnaghan, Mr. Calvin Spence of the BMA and the Medical Protection Society. She explained that she had dealt with Adam’s case and was: <i>“... willing to attend any meeting about this case, including a meeting with clinicians, administrative staff, HM Coroner and whoever else wishes to attend. As I was the pathologist who carried out the autopsy I feel my opinion on the case is relevant to such a meeting and as such the case could be discussed in full” [sic]</i>	Ref: 011-023-123	
	Following discussions with Dr. Alison Armour and Dr. George Murnaghan (over the period 1 <sup>st</sup> December to 8 <sup>th</sup> December 1995), the Coroner informed Dr. George Murnaghan that it: <i>“appeared imperative that the equipment was now independently examined”</i> .	Ref: 011-025-125	
	Dr. Murnaghan telephones the Coroner from Dr. O’Hara’s office and there is a conversation between the Coroner and Dr. O’Hara, following which it is agreed that the equipment should be independently examined.	Ref: 011-025-126	
<b>11<sup>th</sup> December 1995</b>	Dr. Fiona Gibson sends her report to Dr. George Murnaghan apologising for him not receiving the report last week: <i>“Please find it enclosed – I hope it is appropriate”</i>	Ref: 059-065-151	
<b>December 1995</b>	Letter from Mr. Patrick Keane to Susan Young in which he very briefly describes the progress of	Ref: 059-056-133	

<sup>37</sup> Dr. Denis O’Hara (Consultant Paediatric Pathologist at the Royal – involved in Lucy’s case): See Schedule of Persons for details

<sup>38</sup> Dr. Bharucha (Consultant Haematologist at Belfast City Hospital): See Schedule of Persons for details

<sup>39</sup> Professor Jack Crane (State Pathologist): See Schedule of Persons for details

	Adam's surgery. He acknowledged the surgery was technically difficult and stated: <i>"the kidney was successfully put into to the child and perfused quite well initially and started to produce urine. At the end of the procedure it was obvious that the kidney was not perfusing as well as it had initially done but this is by no means unusual in renal transplantation. The whole operating procedure ... about 3 hours. I was informed later on that day that the child had severe cerebral oedema and that he was probably brain dead. In summary, therefore, the operation was difficult but a successful result was achieved at the end of the procedure"</i>		
<b>? December 1995</b>	Coroner telephones Dr. Edward Sumner <sup>40</sup> who agreed to provide an opinion for the Inquest	Ref: 011-027-128	
<b>13<sup>th</sup> December 1995</b>	Letter from the Coroner to Dr. Alison Armour advising her of his meeting on 3 <sup>rd</sup> December 1995 with Drs. Murnaghan, Gaston and Lyons during which they expressed the view that <i>"the death had nothing to do with anaesthetics"</i> and agreed that it is <i>"an immensely complex case"</i> . The letter also states that Drs. Gaston and Lyons felt there was a need for the opinion of a Paediatric Anaesthetist and that Dr. Edward Sumner had agreed to provide an opinion. He also states that he had the impression from something said by Dr. Denis O'Hara that the findings of 'gross cerebral oedema' could be explained by the time Adam was on the ventilator. The letter concludes by passing on Dr. Edward Sumner's request that: <i>"he be sent copies of all the notes - everything you have"</i>	Ref: 011-027-128	
<b>14<sup>th</sup></b>	Letter from Dr. David Webb to Dr	Ref: 059-061-147	

<sup>40</sup> Dr. Edward Sumner (Consultant Paediatric Anaesthetist, Great Ormond Street): See Schedule of Persons for details

<p><b>December 1995</b></p>	<p>George Murnaghan describing his involvement with Adam from 7.30pm on 27<sup>th</sup> November 1995. He stated that his examination at that time indicated brain stem death: <i>"I noted he had severe extensive bilateral fundal haemorrhages suggestive of acute raised intracranial pressure. I reviewed his CT scan which showed diffused generalised cerebral oedema with obliteration of the basal cisterns fulfilling the radiological criteria for coning ... My impression was that he had suffered severe acute cerebral oedema which was likely to have occurred on the basis of osmotic disequilibrium causing a sudden fluid shift"</i></p>		
<p><b>15<sup>th</sup> December 1995</b></p>	<p>The undated 'Report on Equipment Used During Untoward Incidents in the Operating Theatres, RBHSC' of Messrs. Wilson &amp; McLaughlin (signed by John Wilson only) is received by the Coroner from Dr. George Murnaghan. It states that: <i>"Siemens Patient Monitor, Model 1281, Serial No. (This monitor is currently out for repair – new display screen is being fitted and a loan monitor is in use) ... The Anaesthetist using the machine is also expected to sign the log before commencing the list but this does not happen on most occasions. A reason for this omission should be requested"</i> and referred to the: <i>"protocols and monitoring procedures set up within the RBHSC's Theatres"</i> Brian McLaughlin confirmed that the Siemens monitor that was present was functioning within specification. However, John Wilson <i>"cannot confirm that the Siemens Patient Monitor [he] tested was the specific monitor used in any specific operation."</i> [In fact it was not the correct equipment] Brian McLaughlin also states that, though he says:</p>	<p>Ref: 011-028-147</p> <p>Ref: 093-028-076 &amp; Ref: 093-027-072</p>	

	<p><i>“These monitors are not easily moved and are not routinely replaced unless they are defective. Therefore I would say from my experience it is very likely the monitor which we examined on 2<sup>nd</sup> December 1995 was the monitor used in theatre on 27<sup>th</sup> November 1995 unless records show that a monitor was removed from theatre RBHSC after 27<sup>th</sup> November 1995 and before 2<sup>nd</sup> December 1995”. In addition, there was “a very remote possibility” of a gas mismatch.</i></p>		
<p><b>20<sup>th</sup> December 1995</b></p>	<p>Letter from Stephen Brown<sup>41</sup> to Dr George Murnaghan briefly describing his prior involvement with Adam in 1991 and then the transplant surgery, which he described as <i>“technically difficult”</i>. He also said that : <i>“at no stage during the operation was I conscious of any problem with his general condition”</i> and that <i>“The profusion of the kidney was satisfactory although at no stage did it produce any urine”</i>.</p>	<p>Ref: 059-060-146</p>	
	<p>Letter from Dr. Alison Armour to Dr. Edward Sumner, enclosing: (i) original hospital notes [but not the full 10 files]; (ii) 2 reports from Dr. Robert Taylor as the Consultant Anaesthetist involved; (iii) a report from Dr. Maurice Savage as Adam’s Consultant Paediatric Nephrologist; and (iv) equipment check report of Messrs. Wilson and McLaughlin. She also summarised the main features of the case including that: (i) Adam was fed via a gastrostomy button which included a night feed of 1,500mls; (ii) the operation produced a little more bleeding than expected and technically was a little more difficult because Adam was well nourished (over weight?); (iii) Adam did not wake up and an urgent CT scan showed gross</p>	<p>Ref: 011-028-130</p>	

<sup>41</sup> Mr. Stephen Brown (Consultant Paediatric Surgeon, RBHSC): See Schedule of Persons for details

	cerebral oedema with the brain bulging through the dura		
<b>22<sup>nd</sup> December 1995</b>	<p>Letter from Dr. Alison Armour to Professor Jeremy Berry<sup>42</sup>, enclosing: (i) Adam's notes; (ii) report of Consultant Anaesthetist (Dr. Edward Sumner); (iii) report of Consultant Paediatric Nephrologist (Dr. Maurice Savage); (iv) equipment check report of Messrs. Wilson and McLaughlin; (v) histological slides</p> <p>The histological slides that were taken from (a) lungs (b) larynx (c) liver (d) kidney (e) transplanted kidney (f) spleen (g) lymph nodes<sup>43</sup> are also provided to Professor Berry</p> <p>Dr. Armour summarised the main features of the case including that: (i) Adam was fed via a gastrostomy button which included a night feed of 1,500mls; (ii) the operation produced a little more bleeding than expected and technically was a little more difficult because Adam was well nourished (over weight?); (iii) Adam did not wake up and an urgent CT scan showed gross cerebral oedema (weight of unfixed brain '1,320gms'). Professor Jeremy Berry is asked him to look at the slides and provide the Coroner with his expert opinion.</p>	Ref: 011-029-151	
<b>3<sup>rd</sup> January 1996</b>	Letter from the Coroner to Dr. Edward Sumner referring to the letter from Dr. Alison Armour and confirming that he wished him to provide a Report for Adam's Inquest	Ref: 011-031-163

	Adam's Inquest		
	<p>Letter from Dr. Alexander to the Coroner enclosing his Report on Adam. He claims that there is 'very little available information concerning dilutional hyponatraemia (low serum sodium) in children'. He refers to Arrieff's paper: 'Hyponatraemia and death or permanent brain damage in healthy children' referring to how:</p> <p><i>"... generally healthy children with symptomatic hyponatraemia (101-123mmol/l) can abruptly develop respiratory arrest and either die or develop permanent brain damage".</i></p> <p>He summarises his opinion as:</p> <p><i>"The complex metabolic and fluid requirements of this child having major surgery led to the administration of a large volume of hypotonic (0.18%) saline which produced a dilutional hyponatraemia and subsequent cerebral oedema ... Dr. Taylor is to be commended on the detailed notes and records he kept throughout the anaesthetic".</i></p>	Ref: 011-030-153	
<b>4<sup>th</sup> January 1996</b>	Meeting between Ms. Strain (Adam's mother) and the Coroner during which she informs him that, amongst other things, there are 10 files of medical notes for Adam and she queries whether they have all been made available to the experts	Ref: 011-033-165	
	Coroner speaks to Dr. Alison Armour who states that she had not sent all 10 files to the experts due to the large number. The Coroner suggests that she write to the experts advising of the files and stating that they could be accessed through Dr. George Murnaghan, which she agreed to do	Ref: 011-033-165	
<b>5<sup>th</sup> January 1996</b>	The Coroner sends Dr. John Alexander's report to Ms. Strain	Ref: 011-034-166

	Coroner sends Dr. Edward Sumner's Report to Dr. Alison Armour Alexander, together with the article to which it refers	Ref: 011-048-181	
<b>2<sup>nd</sup> February 1996</b>	Note from Dr Robert Taylor to Dr George Murnaghan commenting on Dr Sumner's Report and criticising his reliance on Arieff's 1992 BMJ paper as seriously flawed since Adam's kidneys were polyuric and, therefore, would not respond to ADH to cause water retention. He summed up the position as: <i>"Apparently then the whole discussion of Adam's management comes down to the fluids given ie type and quantity. I obviously agree with the two experts that for a healthy normal child such fluids <b>may be excessive</b>. However, both have failed to comprehend the</i>	Ref: 059-053-108	

	<i>physiological differences in this case and have used dubious scientific argument in an attempt to explain cerebral oedema. In Adam's case, where the urine output of his native kidneys had to be maintained, deficits had to be replaced and extra fluids had to be given to provide the donor organ with adequate function, the type and volume of fluids were appropriate."</i>		
<b>7<sup>th</sup> February 1996</b>	Dr. George Murnaghan faxes Dr Robert Taylor's note of 2 <sup>nd</sup> February 1996 to Dr Alison Armour: <i>"on the understanding that the contents are for your personal information and as a background briefing, in order to assist in coming to your conclusions in this difficult matter."</i>	Ref: 059-052-107	
<b>12<sup>th</sup> February 1996</b>		Ref: 080-007-220 BP3050/95	Letter from Chief Executive of Health & Personal Social Services Northern Ireland to inter alia Chief Executives of Trusts & Boards providing: 'Guidance for staff on relations with the public and the media'
<b>25<sup>th</sup> March 1996</b>	Letter from Professor Jeremy Berry to the Coroner enclosing his Report with the comment: <i>"I am unable to throw any light on the cause of this child's death. I suspect the answer lies in precise details of his clinical management and the examination of his brain ... I doubt this kidney would ever have functioned"</i>	Ref: 011-053-187

<b>1<sup>st</sup> May 1996</b>	Letter from Mr. Patrick Keane to Dr. George Murnaghan correcting the figure for blood loss given in the Report on Autopsy as 1500cc, on the basis that it would have constituted almost Adam's entire blood volume and would have been a	Ref: 059-036-070	

	massive loss. He stated that it should have been 1500cc of fluid loss <i>"which contained blood, peritoneal fluid and urine"</i>		
<b>8<sup>th</sup> May 1996</b>	Letter from Dr. Robert Taylor to Dr. George Murnaghan criticising the Report on Autopsy on a number of grounds, including: (i) the statement that <i>"most of the ... fluids given ... were ... sodium chloride 38mmol/L"</i> as factually incorrect and prejudicial; (ii) the suggestion that there was any impaired cerebral perfusion on the basis of a lack of evidence since intracranial pressure was not monitored; (iii) the lack of any <i>"premorbid nor postmorbidity evidence that excessive volumes of fluid were administered which produced dilutional hyponatraemia"</i> <i>"I believe it is unacceptable to speculate on the cause of Adam's death without direct post-mortem evidence and by misrepresenting the quantities and types of fluids given"</i>	Ref: 059-036-072	
<b>9<sup>th</sup> May 1996</b>	Letter from Brangam & Bagnall & Co to Dr. George Murnaghan seeking further information from the clinicians as to: <i>"strengths and weaknesses (if any) of the care provided for Adam"</i>	Ref: 060-022-041	
<b>13<sup>th</sup> May 1996</b>	Letter from Mr. Patrick Keane to Dr. George Murnaghan in response to a request for a letter on <i>"strengths and weaknesses in Adam's case"</i> . He stated: <i>"As far as I was concerned the Anaesthetic on a very difficult patient went ahead without any problems. The surgery whilst difficult was finally completed in a satisfactory manner"</i>	Ref: 059-034-067	
<b>28<sup>th</sup> May 1996</b>	Letter from Ms. Strain to the Coroner pointing out an error in Dr. Alison Armour's post-mortem Report: <i>"Adam was only fed 600mls during the day not 900mls ... he was fed 2100mls in total per day, which was"</i>	Ref: 011-076-211	

	<i>less than he received in his 5 hours of surgery"</i>		
<b>29<sup>th</sup> May 1996</b>	Letter from Coroner to Dr. Alison Armour enclosing a letter dated 28 <sup>th</sup> May 1996 from Adam's mother pointing out an error in the Report on Autopsy in that: <i>"Adam was only fed 600mls during the day not 900mls as stated by Dr Armour"</i> and that <i>"he was fed 2100mls in total per day, which was less than he received in his five hours of surgery"</i>	Ref: 011-077-212 & Ref: 011-076-211	
<b>30<sup>th</sup> May 1996</b>	Letter from Brangam Bagnall & Co to Dr. George Murnaghan advising that the matter is likely to proceed to litigation and referring to having: <i>"identified a number of issues which are likely to be capable of creating difficulties for us at the Inquest"</i> and the fact that <i>"the clinicians, and in particular, Dr. Taylor will be closely examined in relation to the issues flagged up by Dr. Sumner"</i> . Also: <i>"The essential issue of course relates to the fluids which were given to the child, and I know that with retrospect, Mr Savage feels the child may have received excessive fluids"</i>	Ref: 059-020-046	
<b>30<sup>th</sup> May 1996</b>	Letter from Dr. George Murnaghan to Brangam Bagnall & Co: (i) advising that he will be having further discussions with Dr. Robert Taylor about the <i>"various potential problems that may arise at Inquest"</i> ; (ii) that he will probably consult with Dr. Joe Gaston also; and (iii) suggesting a further meeting with Drs. Taylor and Savage	Ref: 059-027-058	
<b>3<sup>rd</sup> June 1996</b>	Reply from Dr. Alison Armour to the letter of 29 <sup>th</sup> May 1996 from the Coroner stating: <i>"The figures regarding Adam's fluid management were provided by the medical staff involved in his care. My opinion on the cause of death stays the same regardless of whether he received 600mls or 900mls of fluid. It is not just the volume of fluid he</i>	Ref: 011-079-214	

	<i>received but the type. The fact that his sodium level was low intra-operatively is the critical point"</i>		
<b>5<sup>th</sup> June 1996</b>	Letter from the Coroner to Ms. Strain enclosing the response of 3 <sup>rd</sup> June 1996 from Dr. Alison Armour	Ref: 011-080-215	
??	Note from Dr. Robert Taylor to Mr. George Brangam of Brangam Bagnall & Co dealing with Adam's fluid administration and explaining: <i>"Adam's kidneys had lost the ability to concentrate urine (polyuria) so they were unresponsive to ADH (anti-diuretic hormone). Therefore the dilutional hyponatraemia discussed in the paper by Arieff could not have occurred in this case ... After the transplanted kidney failed to function I was very concerned that despite my best calculations and estimate of the losses I had not given sufficient fluid!"</i>	Ref: 059-004-007	
<b>7<sup>th</sup> June 1996</b>	Letter from Brangam Bagnall & Co to Dr. George Murnaghan dealing with areas of concern and the <i>"veiled criticisms"</i> in Dr. Edward Sumner's Report. He made it clear that the target of the Coroner's interest was likely to be on Adam's anaesthetic management. He sought assistance from Dr. Taylor on a number of matters, including: <i>"... instructions ... from Dr. Taylor and if he has any difficulties in relation to accepting that cause of death [from the Report on Autopsy], then perhaps he would let me have a note of same"</i>	Ref: 059-014-038	
	Memorandum from Dr. George Murnaghan to Drs. Robert Taylor, Maurice Savage and Joe Gaston: (i) providing a copy of the letter dated 7 <sup>th</sup> June 1996 from Brangam Bagnall & Co; (ii) making arrangements for a response; (iii) also making arrangements for Dr. Robert Taylor to conduct a viewing for	Ref: 059-009-027	

	the "two Georges" [Mr. George Brangam and Dr. George Murnaghan] of the operating theatre to view the monitoring equipment and associated tubings etc		
	Note from Dr. Robert Taylor to Mr. George Brangam of Brangam Bagnall & Co dealing with Dr. Edward Sumner's comments on thiopentone and steroids for 'brain protection' and conceding that they have a dubious role in brain protection whilst also acknowledging that he did not administer them for that reason	Ref: 059-009-028	
<b>10<sup>th</sup> June 1996</b>	Letter from Dr. Maurice Savage to Dr. George Murnaghan commenting on Dr. Edward Sumner's Report, advising that: (i) Adam received 2100mls per day which was administered during the day in 2 boluses of 300mls each with the balance of 1500mls being by continuous gastrostomy infusion over the night; (ii) Adam had an overnight deficit of some 600mls to be made up at a rate that depended upon the speed with which one wanted to 'catch up'; (iii) claiming that it would have been possible to check Adam's electrolytes was venous access was achieved in theatre.	Ref: 059-003-005	
<b>18<sup>th</sup> June 1996</b>	Adam's Inquest - commencement of the evidence	Ref: 011-016-114	
	Inquest into Adam's death opened and evidence from Constable Tester, Ms. Strain, Dr. Alison Armour, Dr. Edward Sumner, Dr. John Alexander, Mr. Patrick Keane Inquest adjourns to 21 <sup>st</sup> June 1996	Ref: 011-008-024, Ref: 011-009-025, Ref: 011-010-030, Ref: 011-011-042, Ref: 011-012-079, Ref: 011-013-093	
<b>19<sup>th</sup> June 1996</b>	Draft Statement for the Royal prepared by Dr. Joe Gaston, refers to the Arieff paper and "a	Ref: 060-018-036	DLS have confirmed the following by a letter to the Inquiry (Ref: INQ-

	<p><i>number of renal transplants complicated by hyponatraemia leading to death in 10 (reported May 1996)"</i></p> <p>In the light of that the draft Statement makes <i>"recommendations for the prevention and management of hyponatraemia arising during paediatric surgery":</i></p> <p>1. <i>Major surgery in patients with a potential for electrolyte imbalance should have a full blood picture (which includes haematocrit value) and an electrolyte measurement performed 2 hourly or more frequently if indicated by the patient's clinical condition.</i></p> <p>2. <i>A serum sodium value of less than 128mmol/L indicates that hyponatraemia is present and requires intervention by the anaesthetist. A value of 123mmol/L or less indicates the onset of profound hyponatraemia and must be managed immediately.</i></p> <p>3. <i>The operating theatre must have access to timely reports of the full blood picture and electrolytes to allow rapid intervention by the anaesthetist, when indicated"</i> <i>(Emphasis added)</i></p> <p>A subsequent version of the Draft Statement (finalised in consultation with Consultant Anaesthetists Dr. Robert Taylor, Dr. McKaigue<sup>56</sup> and with the subsequent approval of Dr P Crean<sup>57</sup>) is faxed by Dr. George Murnaghan to Brangam Bagnall &amp; Co.<sup>58</sup> It refers to the: <i>"rare circumstances encountered in the Adam Strain case, and having regard to the information contained in the paper by Arieff et al (BMJ 1992) and additionally having regard to information which has recently come to notice that perhaps there may have been nine other cases in the United Kingdom involving hyponatraemia which led to death in</i></p>	<p>Ref: 060-014-025</p>	<p>0228-10):</p> <ol style="list-style-type: none"> <li>1. Recommendations were drawn up for the prevention and management of hyponatraemia by those anaesthetists who would be involved in major paediatric surgical procedures.</li> <li>2. The recommendations at Ref: 060-018-036 may be considered substantive in that they were drawn up by the only anaesthetists in NI who were performing such work.</li> <li>3. There would have been no necessity or requirement to circulate the recommendations outside RBHSC or the Royal Hospitals Trust and the Trust did not do so.</li> </ol>

	<p>Adam's Inquest - continuation of the evidence: Evidence from Dr. Taylor and Dr. Savage. During his evidence Dr. Robert Taylor produced a further statement identified as 'C5', which is identical to the draft statement faxed by Brangam Bagnall &amp; Co to Dr George Murnaghan on 21<sup>st</sup> June 1996<sup>61</sup></p>	<p>Ref: 011-014-096 &amp; Ref: 011-015-109 Ref: 011-014-107a for 'C5'</p>	
	<p>Verdict on Inquest: "Cause of death: I(A) Cerebral Oedema due to (B) Dilutional hyponatraemia and impaired cerebral perfusion during renal transplant operation for chronic renal failure (congenital obstructive uropathy) Findings: The onset of cerebral oedema was caused by the acute onset of hyponatraemia from the excess administration of fluids containing only small amounts of sodium and this was exacerbated by blood loss and possibly the overnight dialysis and the obstruction of the venous drainage to the head"</p>	<p>Ref: 011-016-114</p>	

### SCHEDULE 3: From the Inquest Verdict on 21<sup>st</sup> June 1996 to November 1998

<sup>61</sup> See Ref: 059-008-024 (for fax sheet) & Ref: 059-008-025 (for the draft statement) NB Dr George Murnaghan's Inquiry Witness Statement goes further than that Draft Statement: "This statement indicated that all paediatric anaesthetic staff within the Trust would be made aware of the particular phenomena associated with electrolyte imbalance, the need for careful monitoring and in particular the monitoring of their electrolyte balance" (Ref: 018)

Date & Time	Events in relation to Adam	Source/ Reference	Other Developments
21 <sup>st</sup> June 1996	Dr. George Murnaghan noted that: <i>“Other issues identified which relate to structure and process of paed renal transplant services – agreed with IWC [Dr. Ian Carson<sup>62</sup>] that should deal with this as a RM [risk management] issue &amp; arrange a seminar with HM Mulholland/E Hicks,<sup>63</sup> JG Gaston/RH Taylor, M Savage/M O’Connor, IWC &amp; GAM [Dr. George Murnaghan] present asap”</i>	Ref: 059-001-001	
22 <sup>nd</sup> June 1996	Report in the ‘Belfast Telegraph’ which states: <i>“In a statement the Trust said it is taking action in the light of the rare circumstances encountered in Adam’s case and because of new information. In future all patients undergoing paediatric surgery who potentially have an imbalance in salt levels will be carefully checked. The Trust said that where necessary intensive monitoring will be undertaken and all anaesthetists will be made aware of the possible complications”</i>	Ref: 069A-102-423	
26 <sup>th</sup> June 1996	Letter from the Coroner to Dr. Alison Armour enclosing the letter from Dr. Edward Sumner of 20 <sup>th</sup> June 1996	Ref: 011-085-220 & Ref: 011-082-217	
	Adam’s death is registered following receipt of the certificate from the Coroner. It records the cause of death as: 1(a) cerebral oedema; (b) dilutional hyponatraemia and impaired cerebral perfusion during renal transplant operation for chronic renal failure (congenital obstructive uropathy)	Ref: 070-001-001	

<sup>62</sup> Dr. Ian Carson (Medical Director, Royal): See Schedule of Persons for details

<sup>63</sup> Dr. Elaine Hicks (Consultant Paediatric Neurologist, RBHSC): See Schedule of Persons for details

<p><b>2<sup>nd</sup> July 1996</b></p>	<p>Letter from Brangam Bagnall &amp; Co to Dr. George Murnaghan referring to the sterling help of Dr Joe Gaston and commenting: <i>“it is not without note that the Coroner did not issue a recommendation in this case, which I believe was in large part due to the fact that the Deponents gave their evidence in a fair, objective and professional manner and at the same time were alert and aware of those issues which might cause an erosion of public confidence. ... as you know the threat of litigation has already been mooted and I believe we need to meet to discuss the way in which the Trust intends to meet that challenge.”</i></p>	<p>Ref: 060-020-039</p>	
<p><b>10<sup>th</sup> July 1996</b></p>	<p>Letter from Dr Sumner to the Coroner enclosing a copy of the paper on dilutional hyponatraemia that he had accepted for publication in ‘Paediatric Anaesthesia’ (referred to in his letter of 20<sup>th</sup> June 1996, Ref: 011-082-217) and advising that Professor Arieff had agreed to write the editorial</p>	<p>Ref: 011-088-223</p>	
<p><b>September 1996</b></p>	<p>Dr. Maurice Savage and Dr. Mary O’Connor produce revised ‘RBHSC Renal Transplant Guidelines’ to state that: (i) U&amp;E should be repeated at the time of going to theatre; (ii) electrolytes to be checked 2 hourly in theatre; (iii) normal saline, plasma or blood (as appropriate) to be used in theatre to raise CVP<sup>64</sup> to 8-10 mmHg prior to releasing vascular clamps<sup>65</sup> [to perfuse<sup>66</sup> the kidney]</p>	<p>Ref: WS-0021/1, p.5</p>	
<p><b>23<sup>rd</sup> October 1996</b></p>	<p><i>Claire dies at RBHSC</i></p>		
<p><b>13<sup>th</sup> November</b></p>		<p>Ref: 080-009-233</p>	<p>Letter to CMO (Sir Kenneth Calman)</p>

<sup>64</sup> For ‘CVP – central venous pressure’: see Glossary of Terms

<sup>65</sup> For ‘vascular clamps’: see Glossary of Terms

<sup>66</sup> For ‘perfusing the kidney’: see Glossary of Terms

<p><b>1996</b></p>			<p>providing the agreement of: (i) British Association of Medical Managers, (ii) Central Consultants and Specialist Committee of the BMA, (iii) National Association of Health Authorities &amp; Trusts, (iv) NHS Trust Federation on the implementation of: <i>"Maintaining Medical Excellence"</i>, including that the job description of the Medical Director should include responsibility for: <i>"ensuring that procedures are put in place and made known to all doctors employed by the trust ... for reporting a colleague doctor ... when they have concerns that their conduct, performance or health might be a threat to patients [and] investigating and taking appropriate action"</i></p>
<p><b>10<sup>th</sup> December 1996</b></p>	<p>Anaesthetic record keeping in Adam's case reviewed at an Anaesthetics Directorate Clinical Audit meeting in which it is recorded that <i>"Two problems were identified – Inadequate Records and no records at all ... Common areas of inadequate information were to be found in ... Drug and Fluid administration"</i> Also a handout titled 'Anaesthetic Record Set' – Suggestions as to a reasonable content was given to everyone.</p>	<p>Ref: 078-015-098  (1996) Published by Association of Anaesthetists of Great Britain &amp; Ireland</p>	
<p><b>10<sup>th</sup> January 1997</b></p>		<p>Ref: 080-009-232 HSS(MD)3/97</p>	<p>Letter from the CMO (Dr. Henrietta Campbell) to Chief Executives of Trusts and Medical Directors asking them to put into effect the agreement in the letter of 13<sup>th</sup> November 1996 to Sir Kenneth Calman</p>
<p><b>19<sup>th</sup> March</b></p>	<p>Letter from Brangam Bagnall &amp;</p>	<p>Ref: 060-016-031</p>	

<b>1997</b>	Co to Dr George Murnaghan stating in relation to Adam that: <i>"I believe from a liability point of view, this case [Adam's] cannot be defended"</i>		
<b>8<sup>th</sup> April 1997</b>	Litigation brought by Adam's mother in respect of his death is settled without admission of liability and with the inclusion of a confidentiality clause	Ref: 060-015-028	
<b>9<sup>th</sup> May 1997</b>	Memorandum of Dr George Murnaghan to Drs. Savage, Webb and Taylor and Messrs. Keane and Brown advising them that Adam's case had settled but that: <i>"From a liability position the case could not be defended"</i>	Ref: 060-010-015	
<b>May 1997</b>			Alison Armour's article is published in the BMJ: 'Dilutional hyponatraemia: a cause of massive fatal intraoperative cerebral oedema in a child undergoing renal transplantation' [ie Adam]
<b>30<sup>th</sup> April 1998</b>		Department of Health & Social Services	'Fit for the Future' – Consultation paper about the future of the health and personal social services in Northern Ireland
<b>November 1998</b>		British Transplantation Society	'Towards Standards for Organ and Tissue Transplantation in the United Kingdom' – providing 'best practice' <sup>67</sup>

<sup>67</sup> This was followed, in Northern Ireland by the Renal Services Review 2002 commissioned by the Department of Health, Social Services & Public Safety
