Dear Madam

RE: INQUIRY INTO HYPONATRAEMIA RELATED DEATHS

I refer to the above and your letter of 19th October 2011 (CM- 0041-11). I now enclose original CT films taken by Dr CCM Morrison dated 9th June 2011 together with Dr Morrison's Report, for your attention.

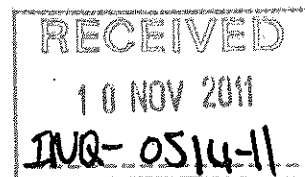

As these are the original CT films, they are sent to you on your undertaking to return same to us in due course, and to ensure that they are retained appropriately and safely until such times as they are returned to and acknowledged by us.

I should be grateful if you could sign one copy of this correspondence by way of acknowledgement of the documents enclosed herewith and of the undertaking under which they are provided.

Yours faithfully

Angela Crawford
Solicitor

ROOM AE GENERAL

unenanced and enhanced scans were performed.

Hyperdensity is noted in relation to the meninges and there is loss of definition of the basal cisterns in keeping with raised intra-cranial pressure.

The grey white matter differentiates and is preserved.

Following contrast injection there is no interval change

In particular, as requested a sub-dural empyema has been excluded.

I have discussed this case with Dr Steven McKinstry, who feels that appearances are more in keeping with cerebral oedema which is highlighting the meninges and normal structures.

A sub-arachnoid haemorrhage is therefore unlikely

RADIOLOGIST Dr. C.C.M. Morrison
