Ilona - could you hold a hard copy of Terry's response with the hyponatraemia papers. Also trim to the CSCG - secondary care container as 'Email response from T McMurray to Dr Briscoe - 10.04.08 on link between annual appraisal and hyponatraemia'.

Thanks

E

Hi Maura

The annual appraisal process for the relevant specialties would be a logical approach. I recently completed the BMA module very good and have my own certificate!

Terry

terry

any thoughts in respect of established consultants and how we get engagement at consultant level. Presumably could the Trust make it mandatory for all relevant consultants and associate specialists to include in their annual appraisal?

SENT ON BEHALF OF TONY STEVENS

Dear Colleagues

I have been reviewing our progress in implementing recommendations with respect to hyponatraemia in children. The Belfast Trust has an action plan to implement all the practical issues but we have had some considerable debate about training particularly for consultants. The BMA offers very good on line training, by being reluctant to be prescriptive in telling all consultants that they should do this, not least because of my concern as to the value of one off training. I would be interested in the approach you have taken with respect to training of consultant staff in this area.

Regards

Tony
